

NXT Gym Bekasi, Indonesia

Introduction: a new fitness centre in Bekasi, West Java, Indonesia

NXT GYM is a new fitness centre located at Summarecon Mall Bekasi, a shopping mall in Bekasi, a city in West Java Province adjacent to Jakarta. The venue forms part of the retail and leisure offering developed by Summarecon, one of Indonesia's largest property developers.

To support the facility's day-to-day operations and help create a dynamic atmosphere throughout its training areas, a sound system was required that could deliver consistent, high-quality audio coverage across the entire venue.

For this purpose, PT. Panca Inti Bermitra, DAS AUDIO's official distributor in Indonesia, was selected for the project. Founded in 2014 and headquartered in West Jakarta, the company specialises in the distribution, design, installation and technical support of professional audio systems, delivering integration projects for commercial, corporate and leisure venues across the country.

Challenge: combining performance and aesthetic integration

NXT GYM required a sound system capable of delivering clear and powerful audio throughout the training area. Music needed to help create an energetic and motivating environment for members while maintaining consistent coverage across the entire facility.

At the same time, the system had to integrate discreetly into the venue. The loudspeakers and subwoofers needed to occupy as little space as possible while preserving the gym's modern appearance.

List of systems used

- 14 x [Q-23-T](#)
- 6 x [Q-8](#)
- 2 x [INTEGRAL-A1004](#)
- 2 x [INTEGRAL-A1602](#)

Solution: a compact configuration based on QUANTUM and INTEGRAL

To meet these requirements, PT. Panca Inti Bermitra designed a solution based on the QUANTUM and INTEGRAL series. The installed system comprised 14 Q-23-T systems and six Q-8 subwoofers, powered by two INTEGRAL-A1004 amplifiers and two INTEGRAL-A1602 amplifiers.

The combination of these systems provided uniform coverage throughout the training area, delivering clear and well-defined audio in every part of the gym. Their compact format also enabled seamless integration into the facility without interfering with the interior layout or occupying valuable space.

The INTEGRAL series amplifiers supplied the power and control required to ensure stable and efficient operation throughout the venue's daily activities.

Conclusion: “sound quality and aesthetic integration”

The installation achieved the objectives set by the client, providing a solution capable of combining sound quality, aesthetic integration and efficient use of the available space.

According to PT. Panca Inti Bermitra, “the system delivers powerful, clear and balanced sound reproduction, ensuring an engaging audio experience throughout the training area. At the same time, the compact loudspeaker design allows for discreet integration into the facility without affecting the interior layout or occupying unnecessary space”.

The installation delivered a premium audio experience that fully met the client’s expectations. Thanks to the use of compact, high-performance loudspeakers and subwoofers, the project successfully achieved its goals of sound quality, aesthetic integration and efficient space utilisation.
